ASSIGNMENT NO. 1

# Jev: AI Decision Model

An AI model built for decisions, not conversation

Made by: **Raza Mustafa**

# Introduction to Jev

- Jev is an AI model by TypeSafe AI that returns decisions instead of text.
- It is the first “System One” model: fast, intuitive judgments for software.
- Launched in early access on 15 September 2026.

**Link to Jevons Paradox:** when each AI decision becomes very cheap, software can make many more decisions.

**70–500 ms**

Typical response time per decision call

# How Jev Works

### 1. State

App data is given, e.g. a support ticket or JSON record

### 2. Questions

Developer defines the questions and allowed answers

### 3. One pass

Jev answers all questions together in a single pass

### 4. Decision

Returns a typed answer with a probability; the app acts

**Training:** Jev is trained with RLCD so that its confidence matches how often it is actually right.

# Core Features of Jev

**Choice**
Picks one option from a list, e.g. which team gets a ticket

**Score**
Rates input on a scale, e.g. how angry a customer is

**Noul (yes/no)**
Gives the probability that a statement is true

**Confidence score**
Low confidence tells the app to ask a human

# Jev vs Generative AI

| Aspect | Jev | Generative AI (LLM) |
|---|---|---|
| **Main job** | Decide | Generate content |
| **Output** | Choices, scores, probabilities | Text, code, images |
| **How** | All answers in one pass | One token at a time |
| **Speed & cost** | Very fast and cheap | Slower and costlier |
| **Can write text?** | No | Yes |

*Key point: Jev makes the quick decisions, while generative AI does the writing — they work best together.*

# Applications and Conclusion

**Routing**
Send tickets and leads to the right team

**AI agents**
Choose the next tool or stop risky actions

**Guardrails**
Check if AI outputs follow the rules

**Data labelling**
Classify thousands of records quickly

## Conclusion

- Jev turns AI into a fast, cheap decision layer for software.
- It does not replace chat models; it works alongside them.
- It is still new, so results should be tested before real use.
